NATHAN JENNER

JUNIOR SOFTWARE DEVELOPER | BUSINESS ANALYSIS & DELIVERY EXPERIENCE

Sydney, NSW | 0404 039 791 | njenner@gmail.com

PROFESSIONAL SUMMARY

Career-transitioning junior developer with extensive experience delivering digital products across InsurTech, aviation and enterprise technology environments. Brings practical knowledge of C#, JavaScript, APIs, microservices and the software development lifecycle, supported by more than 10 years working directly with developers, testers, architects and product teams. Recently applying spec-driven development using AI coding agents and the BMAD Framework to turn requirements into structured specifications, implementation tasks and testable software increments. Offers a strong foundation in requirements analysis, problem solving, testing and Agile delivery, with a clear focus on building maintainable software and growing through hands-on development work.

TECHNICAL SKILLS

Languages	C#, JavaScript, TypeScript
Development	Object-oriented programming fundamentals, debugging, code review, clean code principles
Architecture & Integration	REST APIs, microservices concepts, system integration, solution analysis
AI-assisted Development	Spec-driven development, AI coding agents, BMAD Framework, iterative prompting and validation
Delivery & Quality	Git concepts, SDLC, Agile/Scrum, acceptance criteria, functional testing, UAT, end-to-end testing
Tools	Jira, Confluence, Visual Studio, Visual Studio Code, Microsoft Office, Salesforce, Blue Prism
Analysis & Design	User stories, BPMN, process modelling, technical documentation, backlog refinement

DEVELOPMENT APPROACH

- Use spec-driven development to define intent, scope, behaviours and acceptance criteria before implementation, reducing ambiguity for both human developers and AI agents.
- Use the BMAD Framework and AI agents to support structured planning, story decomposition, implementation and review while retaining human validation of requirements, code and outcomes.
- Translate business needs into developer-ready user stories, API and integration considerations, edge cases and test scenarios.
- Apply an iterative build, test and refine workflow, using feedback from developers, testers and stakeholders to improve solution quality.

RELEVANT EXPERIENCE

Steadfast | Principal Business Analyst	**Feb 2020 - Present**

InsurTech development team delivering broker applications

- Work within a persistent Product DevOps team, partnering with developers, testers, architects and product leaders throughout discovery, delivery and production support.
- Create functional and technical user stories with clearly defined scope, behaviours, acceptance criteria, business rules and integration considerations.
- Contribute to microservice and API solution discussions, helping teams identify practical options, dependencies, risks and test scenarios.
- Support implementation by clarifying requirements, reviewing delivered behaviour and resolving gaps across development and testing.
- Manage feature discovery, MVP definition, backlog refinement and prioritisation for complex broker-facing software capabilities.
- Analyse existing systems and processes, then propose customer-focused digital solutions that are feasible within delivery constraints.
- Mentor analysts and promote better documentation, traceability and collaboration across the product stream.

Qantas | Senior Business Analyst	**Mar 2015 - Feb 2020**

Digital Mobility, Salesforce and Robotic Process Automation initiatives

- Embedded in an Agile DevOps squad delivering iOS applications for pilots and maintenance engineers across three digital products.
- Worked closely with software developers and solution architects to clarify technical requirements, remove delivery blockers and evaluate cost-effective solution options.
- Defined user stories, acceptance criteria, end-to-end scenarios and UAT coverage, supporting reliable sprint delivery and release readiness.
- Collaborated with UI/UX designers to align software behaviour with user needs and operational workflows.

- Supported Salesforce implementation activities for contact centres, including requirements, testing, BAU documentation and deployment planning.
- Identified candidate processes for Blue Prism automation and authored test strategies and test scripts for robotic workflows.

ASG Group | Business Analyst	**Sep 2014 - Mar 2015**

- Supported enterprise migration programs by documenting hardware, software and data requirements and validating post-migration outcomes.
- Coordinated deployment and support activities for more than 3,000 computers across 24 sites, including defect tracking and resolution.
- Performed end-to-end testing, data-quality checks and technical issue analysis with client stakeholders and delivery teams.

ASG Group | Technical Lead	**Aug 2012 - Sep 2014**

- Designed, evaluated and delivered technical service improvements, projects and support processes for enterprise clients.
- Led nationwide technical teams, monitored service performance and worked with client management to resolve operational issues.

KPMG | Technical Lead	**Aug 2003 - Jul 2012**

- Led technical support operations across Sydney and Canberra, managed projects and maintained SharePoint sites for support teams.
- Tracked incidents, requests and projects against service levels while reporting progress and risks to senior management.

EDUCATION & CERTIFICATIONS

- ICAgile Certified Professional - Agile Fundamentals
- ICAgile Certified Professional - Product Management (ICP-PDM)
- BCS Requirements Engineering Certificate
- Microsoft C# Fundamentals Certification
- ITIL 4 Foundation Certification
- Skillsoft BABOK v3: Business Analysis Competencies and Business Analysis Techniques
- Diploma of Network Engineering
- Microsoft Certified Systems Administrator (MCSA)
- CompTIA Network+ and CompTIA A+ Certified Professional
- Interconnecting Cisco Network Devices; Introduction to Cisco Networking Technologies
- Certificate II in Information Technology - Technical Support

ADDITIONAL VALUE

- Strong written communication skills with extensive experience producing technical documentation, reports, process models and implementation-ready requirements.
- Commercial and operational perspective developed through enterprise delivery, stakeholder management and production support environments.
- Comfortable working across business and technical teams, with the ability to explain complex concepts clearly and learn unfamiliar systems quickly.
